

# Sample Slides

Hirakata

June 30, 2014

## OK

The frame title always begins with #. This means first-class title or <H1>.

When using more sub (<H2>, ##), take care not insert paragraph between <H1> and <H2>.

# itemize

ordered

- 1 one
- 2 two

un-ordered

- black
- white

The true beamer has more expression such as `tex \item<2->` to display item at delay, but i don't know how to write that in (pandoc-)markdown.

image

# Haskell code

```
fib 0 = 0
fib 1 = 1
fib n = fib (n-1) + fib (n-2)
```

# LISP (Scheme)

```
(define (fib n)
  (cond ((zero? n) 0)
        ((= n 1) 1)
        (else (+ (fib (- n 1)) (fib (- n 2))))))
```
